

How Programming Assignments Affect Your Grade

- You have at most an A- and you have not done any programming assignments, or you do a programming assignment but it does not meet specifications → final grade will remain unchanged.
- You have an A- or A in the course, and you do both programming assignments to specification → final grade will be A.
- You have an A or A- in the course, but you do not complete both programming assignments to specification → final grade will be A-.
- You have a high B in the course, and you complete one programming assignment to specification → final grade will be B+. (One assignment gives you a boost of half a step in letter grade.)
- You have a low B in the course, and you complete one programming assignment to specification → final grade will be B. (One assignment gives you a boost of half a step in letter grade.)
- You have a low B in the course, and you complete both programming assignments to specification → final grade will be B+. (Two assignments give you a boost of a step in letter grade.)
